

Fireball USB Temperature Sensors

Connect measuring probes and temperature sensors to PCs using plug and play USB Fireball connectors.

Easy to use digital temperature probes. Plug one or more Fireballs into PC USB ports and connect to your PC with Albion's DigiTemp or DigiGage software.

- Available with a variety of Albion temperature sensors.
- Albion's unique work piece temperature sensors respond within 2 to 5 seconds of making contact, depending on surface texture, flatness or roundness of that surface.
- Instant USB connectivity.
- 0.5°F/0.3°C accuracy and repeatability.
- No expensive external signal conditioning and amplification circuitry required.
- Self contained electronics to provide a digital output, suitable for interfacing to a PC.
- Reduces clutter and expense by eliminating innumerable system components.
- Pre-calibrated at the factory.
- No recurrent re-calibration.
- Minimal setup time. Plug and play.
- Quantity depends on available USB ports on PC, or hubs.
- Optional interface to SPC programs.
